Members of “TEAM NEW ORLEANS”, “on the ground” in Louisiana.

Press Release

Historic Post-Katrina/ Redevelopment 3-Day Conference Held by Team New Orleans

On August 18, 2006, a group of business people flew to New Orleans, Louisiana to meet and tour the devastated 9th Ward and surrounding areas of New Orleans with Council Member Cynthia Willard-Lewis. This delegation was headed up by the International Humanitarian Ambassador Oscar J. Webb, Chairman of Worldwide Energy. On March 2, 2007, Team New Orleans returned, headed up by Autoclaved Aerated Concrete (AAC) Professionals, Dan Longworth of EVCS Technologies, Inc., of Las Vegas, NV, and William F. Lott of Triple L Mgt. Corp, Baton Rouge, Louisiana, and held a three day Post-Katrina Redevelopment Conference which was chaired by Ambassador Webb. Ambassador Webb stated to the many

attendees: “It took seven months to formulate and create Team New Orleans, which is focused on bringing *hurricane-proof green buildings* and ‘green energy’ to New Orleans.” Team New Orleans development members currently consist of bankers, lawyers, contractors and experts in all facets of construction, including Mr. Bobby Taylor (Waymaker [Enterprises] Inc; Atlanta, GA), Atty. Terris C. Harris (Harris Companies; Mississippi), Don Terry Veal (Veal Global; Alabama), Russ Young (Young and Associates; Mississippi), Lerner C. Jones (J&J Construction; Chicago, IL). In attendance were Steve Williams and Ron Lott of Triple L Construction (Louisiana), Kevin Veal of Veal Global (Louisiana), and Mr. Irvin Robins representing the Louisiana Chapter of The National Association of Minority Contractors (NAMC).

Breakout sessions focused on Housing for the Elderly and Senior Citizens.

The New Orleans redevelopment overview was presented by Elder Joseph Roberts, Executive Director of Regional Neighborhood Community Development Corporation. Joining in the meeting, by way of conference call from Germany, was Dr. Klaus E. Bohnemann of WEHRHAHN, the Engineers of over **90** AAC Production Plants around the world. Dr. Bohnemann has agreed to bring WEHRHAHN’s expertise to build AAC Plants in the Louisiana/Mississippi and the Las Vegas, Nevada area. There are over *four hundred* AAC Plants in countries around the world which meet all ICC Code Approvals, but only *five* in the entire U.S.

Mr. Longworth, accompanied by Dr. Bohnemann, conducted extensive on-site evaluations of the Las Vegas area and its booming building market in January, 2007. Besides being built to new hurricane-proof standards, Mr.

Longworth stated: “These AAC Homes will also be mold-proof, fire-proof, termite-proof, earthquake-proof, energy smart and affordable.” Meetings were designed to bring a practical, proven (75 years), “green building strategy” to the entire New Orleans/Gulf Coast redevelopment process. Mr. Longworth, CEO of EVCS Technologies stated: “Our *solution-oriented* business know-how is the synthesis of over 200 years of experience in the construction and energy industry.” Team New Orleans has an immediate emphasis on creating economic development and employment opportunities, while focusing on residential rebuilding, assisted living projects and housing for the elderly. Team New Orleans has set up offices on Perris Rd., New Orleans, and will be reaching out for all home owners, developers, CDC’s, church organizations and concerned citizens to help rebuild New Orleans and the entire Gulf Region. Team New Orleans plans on modeling its New Orleans strategy in other U.S. cities, particularly those with the same lack of safe, energy smart, affordable housing.

Typical condition of local housing.....18 Months after Katrina.

Ambassador Oscar J. Webb in the lower 9th Ward.
